PROFESSIONAL SUMMARY

Software Engineer with several years delivering cloud-native microservices for financial services. Experienced designing event-driven Java/Spring Boot APIs on AWS, optimizing performance and reliability for high-throughput data pipelines. Led feature ownership, architectural decisions, and cross-team collaboration in agile environments. Aiming to apply this expertise to build scalable, secure backend solutions that drive business value.

TECHNICAL SKILLS

- **Languages:** Java 17/21, Python, Go, TypeScript, SQL
- **Frameworks:** Spring Boot 3.x, Spring Security, Spring Data JPA, Spring MVC, Spring Cloud, Spring Batch
- **Cloud (AWS):** Lambda, ECS/EKS, RDS, S3, SQS/SNS, API Gateway, Step Functions, CloudWatch, IAM, VPC, Secrets Manager
- **Databases:** PostgreSQL, DynamoDB, Redis, MySQL
- **Frontend:** Angular 15+, TypeScript, RxJS, HTML5, CSS3
- **Messaging & Events:** Apache Kafka, AWS SQS/SNS
- **API & Architecture:** REST, GraphQL, Microservices, Event-driven Architecture, Circuit Breaker (Resilience4j), OAuth2/JWT/Okta
- **Observability:** AWS CloudWatch, X-Ray, OpenTelemetry, Splunk
- **DevOps & Tools:** Docker, Kubernetes, GitHub Actions, Maven, Gradle, SonarQube, JUnit, Mockito, Postman, IntelliJ
- **Practices:** Agile/Scrum, TDD, Code Review, ADR authoring, CI/CD, SOLID Principles

PROFESSIONAL EXPERIENCE

Vanguard | *Software Engineer*

Mar 2024 - Present

- Designed and delivered Java 17/Spring Boot 3.x microservices on AWS ECS/EKS, integrating PostgreSQL (RDS), DynamoDB, and Redis to support secure, high-throughput financial data pipelines serving millions of investors.
- Architected GraphQL APIs backed by Spring Boot services, enabling flexible, efficient client queries and reducing over-fetching across downstream consumers.
- Built event-driven workflows using AWS Step Functions, Lambda, and SQS/SNS - improving process reliability, retry handling, and end-to-end observability for critical financial operations.
- Implemented multi-layer caching strategies (Redis + DB-level) that reduced API response latency and cut redundant database load on high-read financial reporting paths.
- Integrated OpenTelemetry, AWS CloudWatch, and X-Ray for distributed tracing and observability across microservices, enabling faster root-cause analysis during production incidents.
- Applied OAuth2/JWT authentication flows with Okta for secure service-to-service and user-facing API access, enforcing fine-grained authorization via Spring Security, which secured all internal APIs and prevented unauthorized access
- Led architectural discussions and authored ADRs for key platform components, aligning product, platform, and security teams and resulting in faster decision-making and more consistent platform design
- Delivered Angular 15+ frontend features - building reactive, type-safe components with TypeScript and RxJS to support internal financial tooling used by investment teams.
- Enforced code quality via SonarQube, JUnit/Mockito test coverage, and thorough code reviews, which lowered defect rates and improved maintainability; also led sprint ceremonies across Agile delivery cycles

Cognizant Technology Solutions | *Java Backend Developer*

Jul 2020 - Dec 2021

- Decomposed a legacy monolithic application into Spring Boot microservices, cutting deployment cycle time by 30% and enabling independent scaling of high-load modules.
- Maintained and optimised CI/CD pipelines using GitHub Actions, automating build, test, and deployment stages - reducing manual intervention by 60%.
- Performed query optimisation and connection pool tuning on PostgreSQL, reducing average API response time by 45% on high-traffic endpoints.
- Led sprint ceremonies as acting Scrum lead across multiple cycles, using JIRA to manage backlog grooming, sprint planning, and retrospectives, which improved team alignment and on-time delivery
- Delivered code review feedback and systematic debugging analysis, contributing to a 40% reduction in production defects over two consecutive quarters.

Sans bound solutions private limited | *Network Infrastructure Intern*

Jan 2019 - Apr 2019

- Documented device inventory for Cisco switches and routers using Excel, enabling senior engineers to locate equipment quickly and reduce lookup time
- Configured Cisco switches using CLI commands, establishing VLANs and port settings to support lab network connectivity
- Studied networking fundamentals, including IPv4/IPv6 addressing and MAC address structures, applying concepts to design simple subnet schemes for lab exercises

EDUCATION

University of North Texas | *M.S., Computer Science*

USA 2021 - 2023

SRM Institute of Science and Technology | *B.Tech, Computer Science*

India 2016 - 2020

CERTIFICATIONS & LEARNING

• GitHub Foundations Certification: GitHub (2024)

• Go: The Complete Guide: Udemy (2025)
